

Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS)

Compliance Statement

At Mobile Mark, we understand the vital need to protect human health and the environment from persistent organic pollutants (POPs), including the extensive family of fluorocarbon chemicals known as PFAS.

PFAS, or Per- and Polyfluoroalkyl Substances, are synthetic chemicals that include Perfluorooctanoic Acid (PFOA), Perfluorooctyl Sulfonate (PFOS), and other related compounds. These substances, known for their resistance to heat, oil, stains, grease, and water, are prevalent in a wide range of consumer, commercial, and industrial products.

It's important to note that Polychlorinated Biphenyls (PCBs), while harmful and widely regulated due to their detrimental effects, are not a type of PFAS. PCBs, once extensively used in electrical equipment, hydraulic fluids, and other industrial applications, are now strictly controlled under environmental guidelines due to their harmful impact.

As part of our commitment to environmental stewardship, we strictly adhere to regulations and strive to minimize the environmental footprint of PFAS. Our actions are in alignment with international agreements, such as the Stockholm Convention, underscoring our dedication to safeguarding both human health and the environment.

Sincerely,

Tam Chau, P.E.
